An automatic water control valve is a valve that can automatically adjust water flow without human intervention. This valve usually monitors water flow, pressure, temperature and other parameters through built-in sensors, actuators or control systems, and automatically opens or closes according to the set parameters to achieve water flow control, pressure stability, temperature regulation and other functions. Automatic water control valves are widely used in occasions where water flow needs to be precisely controlled to ensure the safety, efficiency and energy saving of the system.
