Abstracts

Automation solutions for the power generation sector address physical barriers of power generation in plants and provide stable power supply without any major interruptions. These solutions ensure accurate measurement of emissions occurring in the plant and help in real-time monitoring and controlling of power plants operations.

According to our (Global Info Research) latest study, the global Automation Control in Power Generation market size was valued at USD 3115 million in 2022 and is forecast to a readjusted size of USD 4489.2 million by 2029 with a CAGR of 5.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The latest trend gaining momentum in the market is emergence of integrated solutions. The automation solution vendors are providing integrated solutions with unique software architecture for all the solutions offered by them. The uniform platform integrates the power plant automation systems as well as electrical, IT solutions, and diagnostics of a power plant. The major advantage of using such uniform platform is the maximization of data consistency and minimization of interfaces. For instance, Siemens offers SPPA-T3000 in its SPPA solutions with Embedded Core Software (ECS)."
