Abstracts

Governments across the world are focusing on minimizing the emission of greenhouse gases and reducing the impact of global warming by incorporating several regulatory measures and protocols. These aggressive policies are contributing to the increased adoption of renewable sources for power generation. Technavio's market research analysts have identified the focus of governments towards implement new policies to support the growth of green energy as one of the primary factors that will trigger the growth of the automation solutions market in renewable power generation industry in the coming years. For instance, in the Americas, the US Environmental Protection Agency has come up with guidelines that clearly state that power plants older than 25 years with capacities over 50 MW require upgradation. With the increasing investment in the renewable sector, the adoption of automation solutions will subsequently increase in the power industry, fueling the market's growth prospects.

According to our (Global Info Research) latest study, the global Automation Solution in Renewable Power Generation market size was valued at USD 451.1 million in 2022 and is forecast to a readjusted size of USD 948.3 million by 2029 with a CAGR of 11.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The inception of the new business models will be one of the key trends gaining traction in the automation solution market in the renewable power generation industry during the next few years. With the increasing awareness and adaptability of renewable resources for generating power, the renewable energy sector will witness the emergence of new business models. Several countries across the world are witnessing the preference towards leasing since it bridges the gap between investors and the decentralized solar

PV installation users.
