This industry research report identifies the optimization of CIP (clean-in-place) process in bottling industry to be one of the major factors that will have a positive impact on the growth of this market in the coming years. The need to meet the high sanitation standards set by regulatory bodies makes CIP, a necessity. However, CIP is a time-intensive process and consumes a large amount of water and chemicals, which has increased the demand for optimizing the CIP process through the meticulous use of water and chemicals in the cleaning process. Benefits such as reduced production downtime, improved food safety, maintenance of high sanitation standards, and more flexibility in production processes will increase the adoption of optimized CIP among industries in the next four years.
