In the case of a collision, an airbag is defined as an occupant-restraint device in a vehicle that uses a bag that inflates and deflates quickly. The system consists of an airbag cushion, a flexible fabric bag, an inflating module, and an impact sensor. An airbag's purpose is to offer soft cushioning and restraint to a vehicle occupant in the event of a collision. It has the ability to reduce injuries from the flailing occupant colliding with the interior of the car.

The airbag provides an energy-absorbing surface between the occupants of the car and the steering wheel, instrument panel, body pillar, headliner, and windshield. The driver, passenger, side-curtain, seat-mounted, door-mounted, B and C-pillar mounted side-impact, knee bolster, inflatable seat belt, and pedestrian airbag modules are among the ten airbag modules featured in modern automobiles. During a collision, the airbag electronic controller unit (ECU) gets important information from the vehicle's crash sensors, such as collision type, angle, and impact severity.
