According to our (Global Info Research) latest study, the global Automobile Aluminum Radiator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Car aluminum radiator refers to a car radiator made of aluminum. A large amount of heat is generated when a car engine is running. If this heat cannot be effectively dissipated, it will cause the engine to overheat, affect the performance of the car or even damage the engine. The radiator is an important part of your car's cooling system, dissipating the heat generated by your engine. Traditional car radiators are usually made of aluminum alloy because aluminum has good thermal conductivity and cost-effectiveness, and can effectively dissipate heat.
