According to our latest research, the global Automobile Blow Mould market size will reach USD 6685 million in 2031, growing at a CAGR of 6.0% over the analysis period.

Automobile blow mould refers to a kind of mould used in the manufacturing process of automobile plastic parts by blow molding technology.

Blow molding is a manufacturing process that involves inflating a heated plastic parison (a tubular piece of semi - molten plastic) inside a mold cavity to form a hollow plastic part. The automobile blow mould is designed to shape the plastic material into specific parts required for automobiles, such as fuel tanks, air ducts, and some interior components.

Automobile blow molds play a crucial role in the production of automobile plastic parts. They help to improve the quality and production efficiency of parts while meeting the complex design requirements of automobiles.
