Automobile Drive Motor Rotor is a key rotating component in the motor. It is supported by bearings and usually consists of an iron core and windings. Under the magnetic field generated by the stator, the current on the rotor generates an opposite magnetic field, which causes the rotor to rotate due to torque. It is an important component that converts electrical energy into mechanical energy to drive the car. The shape, size and structure of the rotor will vary depending on the type of motor and application requirements.
