An Automobile Exhaust Muffler is a component located in the exhaust system of a vehicle. Its primary function is to reduce the noise produced by the engine combustion process during the exhaust gas expulsion.

The muffler achieves noise reduction through a series of internal chambers and baffles, which help to reflect and dissipate sound waves. As the exhaust gases pass through the muffler, the sound waves created by the engine's combustion process bounce off the internal surfaces, causing them to interfere and cancel out each other, resulting in reduced noise. Mufflers are available in various shapes, sizes, and materials to cater to different vehicle types and performance preferences. Some mufflers are designed to provide specific sounds or enhance engine performance. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively.
