## Abstracts

The global Automobile Interior Polyurethane Synthetic Leather market size is expected to reach \$ 544.2 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

Polyurethane synthetic leather, also known as PU leather, is a type of synthetic leather that is often used in automobile interiors. PU leather is made by coating a fabric base with a layer of polyurethane, which gives it the appearance and texture of genuine leather. One of the main advantages of using PU leather in automobile interiors is that it is more affordable than genuine leather, while still offering many of the same benefits. PU leather is also easier to maintain than genuine leather, as it is less prone to cracking, fading, and stains.
