The global Automobile Shock Absorber Piston Rod market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The shock absorber piston rod is a rod-shaped part inside the shock absorber, which is sealed with the shock absorber cylinder and connected to the suspension system through this rod-shaped part. When the vehicle is bumped or hit, the piston rod will expand and contract, and the damping liquid inside the piston rod will convert the impact force into heat energy and dissipate it, so as to achieve the shock absorption effect.
