## Abstracts

3D printing, also known as additive manufacturing, is the process of producing three dimensional objects from a digital file using a printing machine. This process involves laying down successive layers of material until the entire object is built.

The wider application of 3D printing technology in the field of automotive parts has become a trend. Due to the rapid prototyping of 3D printing, automotive manufacturers can apply to the development of automotive exterior design. Compared with the traditional hand-made sludge model, 3D printing can more accurately convert 3D design drawings into physical objects, and the time is shorter, which improves the production efficiency of the automotive design level.

This report focuses on 3D printing materials in automotive.
