Abstracts

the global automotive 3D printing market identifies the introduction of low-cost entry level 3D printers as one of the major factors that will have a positive impact on the market's growth. The availability of entry-level printers will influence tier-2 and tier-3 plastic parts manufacturers and automotive suppliers to adopt 3D printing technology for manufacturing small parts including dampers and bearings. Moreover, the development of affordable entry-level 3D printing technology will increase the adoption and will subsequently reduce the cost of high-capability 3D printers that are currently being used only for industrial applications, in turn, increasing their adoption.

Scope of the Report:

This report focuses on the Automotive 3D Printing in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
