Abstracts

The automotive acoustic engineering services include processes such as designing, development, testing, and simulation of sound originating from the engine, transmission, other auto components, and overall vehicle to bring the interior cabin noise within the permissible range. These processes usually measure the pass-by noise and stationary noise to achieve a satisfactory result for the vehicle. Acoustic engineering and testing services are carried out for different applications such as the powertrain, drivetrain, body interior, and exterior to control and minimize the noise level of the vehicle.
