Abstracts

Automotive acrylonitrile-styrene-acrylate copolymer is an engineering plastic similar to ABS resin, but with higher weather resistance and UV resistance. ASA resin is commonly used in the manufacture of automotive exterior parts, such as body shells, chrome-plated parts, roofs, roof racks, door handles, etc. The advantage of ASA resin over ABS resin lies in its better weather resistance and UV resistance. Exterior automobile parts are exposed to the outdoor environment for a long time and are easily affected by environmental factors such as ultraviolet rays, high temperature, and humidity, which can lead to problems such as color fading and surface aging. ASA resin has excellent weather resistance and can effectively resist ultraviolet rays and climate change, maintaining the beautiful appearance and stable performance of parts for a long time. Therefore, ASA resin is widely used in the automotive industry to produce exterior parts, especially those that require long-term exposure to outdoor environments. It can ensure that the exterior parts of the car have a long service life while maintaining good appearance and performance, improving the overall quality and quality of the car.
