Abstracts

The growing adoption of electric vehicles (EVs) will drive the growth prospects for the global automotive active aerodynamics system market in the forthcoming years. Some of the major factors responsible for the growing adoption of EVs in the automotive market is the increasing demand for vehicles from daily commuters and long-distance travelers and stringent emission norms from the government. Also, increasing the efficiency of EVs by improving the battery technology such as the development of lithium-ion batteries will further accelerate the dependence of people on EVs.

Scope of the Report:

This report focuses on the Automotive Active Aerodynamics System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing use of the advanced active grille shutter system to reduce CO2 emission from vehicles will drive the growth prospects for the global automotive active aerodynamics system market until the end of 2021. Vehicles with the active grille system consume less fuel than vehicles without the active grille system because the engine in a vehicle using modern active grille system reaches the most efficient operating temperature within a short span of time.

The worldwide market for Automotive Active Aerodynamics System is expected to grow at a CAGR of roughly 10.5% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
