Safety of both, driver and passengers is one of the most important concern while travelling. Automotive safety is the procedure of designing and construction of the safety systems of the vehicle, as per the standards and regulation prescribed by the government agencies and transport authorities of the across the world. The main aim of the automotive safety systems is to avoid accidents and minimize the occurrence and impact of the accidents. Present day vehicles are equipped with both passive and active safety systems to protect both passengers and driver from sudden jerk or accidents.

Scope of the Report:

This report focuses on the Automotive Active Safety System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing usage of automobiles for long distance travelling is influencing the demand for automotive safety systems. This is inducing automotive OEMs to extensively focus on improving road safety by preventing accidents and reducing injuries. Technavio's market research study has identified the increase in safety concerns as one of the primary growth factors for the automotive active safety system market. The hectic lifestyle of the consumers and unfavorable driving etiquettes such as messaging, surfing, and speaking on the phone while driving, result in automotive accidents. Safety systems, such as BSD, lane departure warning, parking assist, and DMS assist in accident prevention and driver protection

The development of eco-cruise control is one of the key trends that will gain traction in the automotive active safety system market during the next few years. Eco-cruise control or economic cruise control is different from the normal cruise control as this

system is designed for uneven roads that impact the consumption of significant amount of fuel while driving normally. This eco-cruise control uses GPS and GIS to adjust the speed of the vehicle. Electronic cruise control (ECC) is the combination of intelligent system or the control unit. Using these algorithms, the fuel consumption of the vehicle is reduced.

The worldwide market for Automotive Active Safety System is expected to grow at a CAGR of roughly 12.1% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
