Abstracts

Adaptive fog lights involve the incorporation of a swiveling reflector with normal fog lamps. When a turn signal is activated, or a large steering angle is detected, the fog lamp that corresponds to the in-side wheel is automatically switched on, and the reflector swivels inside the fog lamp to orient the light to the side of the vehicle where the wheels are turning. The market encompasses the sales of passenger cars that incorporate adaptive fog lights. Some of the luxury passenger cars use this system.

Scope of the Report:

This report focuses on the Automotive Adaptive Fog Lights in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global automotive adaptive fog lights market identifies that the introduction of safety regulations for automotive adaptive lighting systems will be one of the major factors that will have a positive impact on the growth of the market.

The primary function of adaptive fog lights is to enhance the visibility and assist drivers in guiding and controlling the vehicle while turning or driving around curves. They also help drivers in avoiding collisions that mainly occur due to poor visibility of normal headlights and fog lamps. This increases the need to improve the lighting systems in vehicles for safety purposes. Numerous countries have already introduced regulations to boost the adoption of adaptive lighting systems in vehicles. This will drive the growth of the automotive adaptive lighting systems market, which in turn, will increase the adoption of adaptive fog lighting systems during the forecast period.

The worldwide market for Automotive Adaptive Fog Lights is expected to grow at a CAGR of roughly 27.0% over the next five years, will reach xx million US\$ in 2023, from
