Abstracts

An advanced driver assistance system (ADAS) helps the driver avoid potential collisions by controlling the vehicle when the user is unable to respond in time. All safety features alert the driver of imminent collisions and prompt him/her to take control of the vehicle. It assists the driver by automating or enhancing vehicle systems to ensure safety and offer a better driving experience. Automotive vehicle production values in China are considered for market sizing. The forecast is based on the trends, drivers, and challenges faced by the Chinese automotive industry.

Scope of the Report:

This report focuses on the Automotive Advance Driver Assistance System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

This market research analysis identifies the increasing demand for night vision systems and blind spot detection from the emerging economies as one of the primary growth factors for the advance driver assistance system (ADAS) market. Owing to the constantly increasing disposable income and the rise in awareness towards the installation of safety systems, the developing countries such as China, India, and Thailand will witness a rapid increase in the demand for automobiles equipped with safety systems such as night vision systems. Moreover, the high demand for luxury vehicles in these countries will also result in the adoption of blind spot detection systems, which will in turn, aid in the growth of the driver assistance systems market.

In addition to being expensive, the traditional automobile cameras that use CCD

technology generate a distorted image on the display units. As a result, original equipment manufacturers will soon shift their focus toward the use of CMOS image sensors in the camera modules since all pixels of these image sensors have their own charge-to-voltage conversion. These image sensors normally include noise-correction, digitize circuits, and amplifiers that help in generating blur-free rear-view images and can also work effectively under extreme weather temperatures. Owing to these benefits, the coming years will witness an exponential increase in the usage of CMOS imaging in camera-based advance driver assistance systems.

The worldwide market for Automotive Advance Driver Assistance System is expected to grow at a CAGR of roughly 34.9% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
