Abstracts

The global Automotive Air Conditioning Electric Scroll Compressors market size is expected to reach \$ 2450.4 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

Global key players of automotive air conditioning electric scroll compressors include DENSO, Hanon Systems, Sanden, etc. The top three players hold a share about 70%. Asia-Pacific is the largest market, has a share about 63%, followed by Europe and Americas, with share 21% and 14%, separately.

The automobile air-conditioning compressor is the heart of the automobile air-conditioning refrigeration system, which plays a role in compressing and transporting refrigerant vapor. The scroll compressor is composed of an end plate and involute scroll teeth extending from the end plate. It has many advantages. For example, the compressor is small in size and light in weight, and the eccentric shaft driving the moving turbine can rotate at a high speed. Because the scroll compressor can operate reliably without the suction valve and the exhaust valve, and it is easy to realize variable speed movement and variable displacement technology. Multiple compression chambers work simultaneously and the gas pressure difference between adjacent compression chambers is small so that the gas leakage is small.
