Abstracts

The global Automotive Air Horns market size is expected to reach \$ 200.2 million by 2029, rising at a market growth of 3.7% CAGR during the forecast period (2023-2029).

Automotive Air Horn is a pneumatic device designed to create an extremely loud noise for signaling purposes. It usually consists of a source which produces compressed air, which passes into a horn through a reed or diaphragm. The stream of air causes the reed or diaphragm to vibrate, creating sound waves, then the horn amplifies the sound making it louder.
