Abstracts

Airbag sensors are responsible for detecting sudden deceleration in a collision. It sends a signal to the airbag control unit which use the vehicle speed, yaw, seat belt and ECU to determine if an airbag should deploy in a crash. Sensors are used for detecting and responding to electrical or optical signals. A sensor converts physical elements (such as temperature, blood pressure, humidity, and speed) into an electrical form, which is easy to measure. They measure physical properties of the environment such as temperature, weight, size, and luminance. Sensors are classified based on the elements they detect and measure. They are basically divided into two types namely: Active sensors and passive sensors. Other common types of sensors are mechanical, electrical, radiation, magnetic, and chemical.

Scope of the Report:

This report focuses on the Automotive Airbag Sensor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. It has been observed the death rate caused by road accidents is increasing every year and this draws the attention for introducing safety features such as airbags that can reduce fatalities during accidents. Technavio's market research report has identified increasing vehicle safety with more airbags as one of the primary factors that will fuel the growth of the automotive airbag sensor market in the coming years. Airbags are present in steering panels, front instrument panels, and sides of car doors and the airbag sensor senses the probability of collision and sends a signal to electronic control unit (ECU) and the ECU deploy the airbag and prevents the passengers from getting injured. With the increasing safety awareness among the consumers, the number of

airbags per vehicle will increase and this will drive the growth of this market. The worldwide market for Automotive Airbag Sensor is expected to grow at a CAGR of roughly 6.7% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
