Abstracts

Alternators are one of the most vital components of an automotive charging system. The other components of automotive charging systems are the battery and the voltage regulator. Vehicles are equipped with many electrical and electronic components, which are powered by the coordinated arrangement of the battery and alternator. Automotive alternators generate alternating current through electromagnetism; the electricity that is generated in an alternator is channeled to the battery, which assists in running several electrical systems. There are two types of alternator: three-phase alternators and single-phase alternators. The type of alternator that is used in a passenger car depends on how it is manufactured.

Scope of the Report:

This report focuses on the Automotive Alternator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the primary drivers for this market is the exponentially increasing sales of passenger cars. The sale of passenger cars is directly correlated with the market growth of automotive alternators as all passenger cars are equipped with alternators. The passenger cars segment contributes to the majority share in the automotive alternator market. In 2015, SUVs and crossovers accounted for the majority of the sales in the Chinese and the European passenger cars market. Increasing preference for fuel efficiency and the comfort of traveling in three-row seats in crossovers and SUVs are the main drivers for the growth of the SUVs and crossovers market in several countries across the globe. Moreover, the lowering interest rates on car loans in countries like the US and Canada is expected to further propel the growth of the automotive alternator

market during the forecast period.

One of the latest trends gaining traction in this market is the rising popularity of smart charging alternators. Ford has developed a car alternator that is controlled by a power control module (PCM) that regulates the amount of battery charged by the alternator. The PCM monitors the temperature of the engine, battery, and the total electric demand for running the interior automotive electronic components and charges the battery to provide the required power. In the luxury car segment, BMW has equipped its vehicles with intelligent alternator control (IAC) to generate sufficient electricity to power a car's onboard electronic units during braking and overrun situations. This power management of the system allows more power to be available during dynamic driving, involving quick acceleration. As a result of these technological advancements, the automotive alternator market is expected to grow in the next few years.

The worldwide market for Automotive Alternator is expected to grow at a CAGR of roughly 4.4% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
