According to our (Global Info Research) latest study, the global Automotive Antenna Module market size was valued at USD 1489.4 million in 2023 and is forecast to a readjusted size of USD 1858.7 million by 2030 with a CAGR of 3.2% during review period.

Automotive Antenna Module is an electrical component which is designed to be mounted on the vehicle refers to receive and transfer information. Typically, an antenna consists of an arrangement of metallic conductors (elements), electrically connected (often through a transmission line) to the receiver or transmitter. An oscillating current of electrons forced through the antenna by a transmitter will create an oscillating magnetic field around the antenna elements, while the charge of the electrons also creates an oscillating electric field along the elements. These time-varying fields radiate away from the antenna into space as a moving transverse electromagnetic field wave. Conversely, during reception, the oscillating electric and magnetic fields of an incoming radio wave exert force on the electrons in the antenna elements, causing them to move back and forth, creating oscillating currents in the antenna.

Global automotive antenna module key players include Laird, Harada, Yokowo, Continental, TE Connectivity, etc. Global top 5 manufacturers hold a share about 65%. China is the largest market, with a share about 40%, followed by North America, with a share about 20 percent. In terms of product, fin type is the largest segment, with a share about 37%.
