## Abstracts

The global Automotive Audio and Infotainment market size is expected to reach \$ 67641 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Automotive audio and infotainment systems are in-vehicle electronic systems that integrate audio playback, navigation, communication, display, and human-machine interaction. Through a central control screen, speakers, and software platform, they provide drivers and passengers with entertainment, information services, and intelligent interactive experiences.

Upstream components include key components and technologies such as chips, display panels, amplifiers and speakers, sensors, operating systems, and software algorithms; downstream applications target OEMs, mobility service providers, and end consumers, and are used in passenger cars, commercial vehicles, and smart cockpit scenarios. In 2025, the global average price of automotive audio and infotainment systems was \$481 per unit, with annual sales of approximately 85.9 million units and a global annual production capacity of 95 million units, resulting in an industry profit margin of 30%.

Global Market Future Development Trends:

First, intelligent cockpits are becoming the core differentiator for vehicles. With the advancement of vehicle electrification and intelligentization, audio and infotainment systems are upgrading from 'configuration items' to 'experience hubs.' Larger screens, multi-screen interaction, high-performance computing platforms, and immersive sound effects are becoming standard features in new models, driving OEMs to increase investment in displays, audio algorithms, and human-machine interaction, leading to continued market expansion.

Second, software-defined and ecosystem integration is accelerating. Systems are evolving from closed hardware to 'hardware-software decoupling,' supporting OTA upgrades, third-party application integration, and multi-system compatibility. Deep

integration of voice assistants, vehicle-to-everything (V2X) connectivity, online content, and navigation services is increasing usage frequency and user stickiness, extending business models from one-time hardware sales to software subscriptions and service monetization.

Third, premiumization and localization are developing in parallel. On the one hand, premium models emphasize branded sound effects, active noise cancellation, and personalized sound fields; on the other hand, emerging markets focus more on cost-effectiveness and stability. With increasing regulations and safety requirements, systems are continuously upgrading in terms of data security, driver distraction management, and reliability. Industry competition will focus on experience, ecosystem, and full lifecycle value.
