An automotive auto-reset circuit breaker is an electrical protection device typically used to protect circuits in automotive electrical systems from damage caused by overloads or short circuits. These circuit breakers have an auto-reset feature, meaning that once triggered to break a circuit, they will automatically restore the connection under certain conditions without the need for manual intervention. These circuit breakers are usually designed to open a circuit if the current exceeds its rating or if a short circuit occurs in the circuit. Once the cause of the tripped circuit breakers is gone, they automatically reset, reconnecting the circuit and ensuring that the electrical system can resume normal operation. This characteristic allows them to provide effective protection in automotive electrical systems while reducing the need for manual intervention and maintenance.
