Abstracts

An automobile automatic transmission system also called as the shelf shifting automobile transmission, involves the process of transmitting the power from the engine to the wheels by using automatically changing gear ratios. This helps move the vehicle from one point to another without the need to shift gears manually. Generally, an internal combustion engine with a capacity to rotate at high RPM is used for providing the automatic transmission system. This is primarily because the engine is capable of providing a variety of speed range and torque outputs, which are essential and beneficial when the vehicle moves in heavy traffic condition.

SCOPE OF THE REPORT:

This report focuses on the Automotive Automatic Transmission System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Several factors are responsible for the growth of the global automotive automatic transmission system market, the first one being the shift of population demand from manual to automatic transmission due to ease of operation. Secondly, the system causes less fatigue to the driver in case of comparable distances. Thirdly, all the adults from the family can drive an automatic transmission vehicle thus, making its use multipurpose and more widened. The global automotive automatic transmission system market is expected to expand with a CAGR of approx. 6% (2017 to 2025).

The worldwide market for Automotive Automatic Transmission System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in
