According to our (Global Info Research) latest study, the global Automotive AR and VR market size was valued at USD 582.2 million in 2023 and is forecast to a readjusted size of USD 6813.8 million by 2030 with a CAGR of 42.1% during review period.

Augmented reality is a digital layer superimposed on the physical world. Augmented reality applications are developed on special 3D programs that enable developers to integrate contextual or digital content with the real world. Moreover, it integrates the real-life environment with virtual details that enhance the experience. This is typically achieved by looking at real-life environments through a smart goggles and headsets, smartphone or tablet screen. Augmented reality in automotive is majorly used for the application that displays the features of pedestrian, navigations, and smart signaling on a windshield.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
