Abstracts

According to our (Global Info Research) latest study, the global Automotive Blockchain market size was valued at USD 459.9 million in 2023 and is forecast to a readjusted size of USD 1515 million by 2030 with a CAGR of 18.6% during review period.

This report mainly focuses on automotive blockchain market. Blockchain uses in the automotive industry include parts authentication, marketing interactions, financial applications, connected car and vehicle tracking, autonomous driving, car sharing, marketing, CO2 emission tracking, and many others.

Blockchain technology in the automotive industry is used to hold data related to cars, including sales, warranty and insurance claims, and other operating costs. Previously, the record keeping process was done by having all process information stored by a third party or by a dedicated person. But with the introduction of blockchain solutions, these records and data are maintained through software developed and designed to reduce the cost of salaries and other similar fees paid to third parties. Hence, the introduction of blockchain solutions in the automotive industry reduces operating costs, which in the long run is driving the growth of this market over the forecast period.
