According to our (Global Info Research) latest study, the global Automotive Body & Comfort Smart Motors and Actuators market size was valued at US\$ 19190 million in 2025 and is forecast to a readjusted size of US\$ 29260 million by 2032 with a CAGR of 6.2% during review period.

Automotive Body & Comfort Smart Motors and Actuators are compact electric motors, gear motors, linear actuators, spindle drives, latch drives and mechatronic motion modules installed in vehicle body, cabin and comfort-related systems. They are typically used in power windows, power seats, sunroofs, roof shades, power liftgates, power sliding doors, door closers, e-latches, mirror-folding mechanisms, HVAC damper systems, charge-port flaps, flush door handles and other local motion-control applications. These products integrate brushed DC motors, brushless DC motors, stepper motors, reduction gears, worm gears, lead screws, balance springs, Hall sensors, position feedback, embedded electronics or communication interfaces to convert commands from body controllers, door modules, cabin controllers or local ECUs into controlled mechanical motion with low noise, anti-pinch protection, soft-closing, position control and reliability under automotive operating conditions.

Based on our research, Automotive Body & Comfort Smart Motors and Actuators should be understood as a family of mechatronic motion components rather than a single motor category. Mature applications such as power windows, power seats, door locks, mirror adjustment and HVAC dampers already have established supply chains and relatively stable cost structures. The new growth layer is coming from power liftgates, powered side doors, e-latches, cinching latches, brushless sunroof motors, flush door handles, charge-port flap actuators, movable cockpit displays and other localized intelligent

motion functions. The narrow market scope used in this report focuses on motors, gear motors, linear actuators, spindle drives, latch drives and local drive modules used in body and comfort systems. It does not include traction motors, EPS motors, brake motors, complete seat assemblies, complete door systems or body domain controllers.

From the demand side, the main driver is not simply global vehicle production growth, but the increasing number and value of body and comfort motion functions per vehicle. Electric vehicles, SUVs, MPVs and premium intelligent models tend to adopt more powered closures, smart seats, soft-closing mechanisms, hidden handles, active flaps and cockpit motion systems. The technology direction is shifting toward quieter operation, lighter structures, brushless motors, integrated electronics, position feedback, anti-pinch control and LIN/CAN communication.
