Abstracts

The global Automotive Body Repair Bench market size is expected to reach \$ 296 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global Automotive Body Repair Bench approximately 128,489 units, with an average global market price of around US\$ 1,406 per unit. Gross margin is about 51%. The cost is 689 usd. The Production is about 200,000 units. Automotive Body Repair Bench refers to a specialized equipment system used in auto body shops to restore damaged vehicle frames and body structures after collisions. It provides a stable platform combined with pulling towers, hydraulic systems, and measuring tools to realign and repair the vehicle chassis and body to manufacturer specifications, ensuring structural integrity and safety.

The future development of Automotive Body Repair Bench will focus on intelligence, high precision, and automation. On the one hand, these platforms will integrate 3D laser scanning, vision sensing, and digital twin technologies to enable real-time, non-contact measurement and dynamic modeling of body deformation, with AI algorithms automatically generating straightening paths and force application plans, greatly improving repair efficiency and accuracy. On the other hand, platforms will connect with vehicle diagnostic systems and cloud databases, providing standardized yet customizable correction strategies by comparing with factory geometric parameters. Human-machine interaction will increasingly adopt augmented reality (AR) and virtual reality (VR) guidance to assist operators in visualizing force application. Furthermore, platforms will evolve toward modular and lightweight designs to meet the straightening needs of new energy vehicles (e.g., battery-chassis integrated structures), while enhancing data networking capabilities to support remote fault diagnosis and industry-

wide big data analytics.
