## Abstracts

The global Automotive Brake Corner Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A brake corner module (BCM) is a compact, integrated system that combines the braking, suspension, and wheel-end functions of a vehicle into a single unit. It typically includes the brake caliper or drum, brake pads or shoes, rotor or drum, wheel hub, bearing, and suspension components such as the control arm and ball joint. By integrating these components into a single module, the BCM simplifies the assembly process, reduces the number of parts needed, and improves the overall performance and reliability of the braking system. BCMS are commonly used in modern automotive designs and are particularly useful in electric and hybrid vehicles where space is at a premium.

This report studies the global Automotive Brake Corner Module production, demand, key manufacturers, and key regions.
