According to our (Global Info Research) latest study, the global Automotive Brake Override System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Automotive Brake Override System is an active vehicle safety feature designed to work as a failsafe measure in the event that your vehicle receives mixed signals (i.e., the gas and the brake are pushed down simultaneously) or an electrical malfunction causes the vehicle to continue accelerating even when the driver's foot is on the brake. In vehicles with brake override, the brake pedal is enhanced with "smart" technology that detects when something abnormal occurs. For example, brake override can detect if the brake pedal and accelerator are pushed at the same time. It recognizes that this is not how people normally drive, and corrects the problem by overriding the accelerate command and bringing the vehicle to a safe stop.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
