Bioplastic is revolutionary material, changing how cars are made to align with global sustainability drive. Europe and North America and neck-and-neck in the automotive bioplastic industry, ranking relatively high in the field of research and development, as compared to other regions. These factors came into play when researchers in Eindhoven University of Technology, Netherlands developed the first car out of completely from bioplastics in June 2018. With a growing number of raw materials, applications, and products, the number of manufacturers, converters, and end users are also increasing significantly in developed nations such as Japan. Moreover, Toyota, a Japanese carmaker, is the frontrun

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%.
