Abstracts

Friction materials are also known as brake materials or clutch materials. These are used to slow down a vehicle by changing kinetic energy to thermal energy with the help of friction and heat transfer in the surrounding environment. The materials are provided with rough surfaces to improve friction. Manufacturers focus on creating materials that reduce the stopping distance when the brakes are applied. In addition, they focus on reducing the weight of the friction materials.

According to our (Global Info Research) latest study, the global Automotive Brake Friction Materials market size was valued at USD 9870.5 million in 2022 and is forecast to a readjusted size of USD 11750 million by 2029 with a CAGR of 2.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
