Abstracts

The global Automotive Cabin Air Quality Sensor market size is expected to reach \$ 203.9 million by 2029, rising at a market growth of 8.7% CAGR during the forecast period (2023-2029).

Global key manufacturers of automotive cabin air quality sensor include Paragon, Denso, Cubic Sensor, etc. The top three players hold a share around 68%. Europe is the largest producer, has a share about 57%, followed by Japan and China, with share 22% and 10%, respectively. The largest market is Europe, with a share about 58%, followed by China and North America, with share 19% and 10%, separately.

Automotive air quality sensors are used to keep track and monitor the quality of air inside the vehicle cabin. There has been a considerable reduction in the cabin emissions with the effective use of automotive cabin air quality sensors in the global market. Furthermore, requirement of enhanced air quality inside the vehicle has backed the growth of automotive cabin air quality sensors market. Driver and the vehicle passengers are often exposed to high level of hazardous pollutants and gases, especially in today's urban areas and cities where the pollution level has reached to an alarming limit. Likewise, growing exhaust emissions coupled with the increasing wear particles make the passengers more vulnerable to the interior pollution. The rising interior emission of hazardous pollutants has led to significant increase in respiratory problems among the consumers. With the use of effective filtration systems combined with a cabin air quality sensor, entry or inflow of foreign particles such as pollen grains, road dust, diesel soot, etc. can be reduced inside the vehicle. Road safety and growing pollution is one of the protuberant issues at the present time and it is estimated to be in the future as well. Digital automotive electronics such as automotive cabin air quality sensor is proficient enough to automate several driving aspects which can reduce

significant cabin pollutants and improve vehicle safety. Automotive cabin air quality sensor is one of the key expansion in this area and is an advancing step for increasing the driving security and safety in the global automotive market.
