## Abstracts

According to our (Global Info Research) latest study, the global Automotive Cables market size was valued at USD 22340 million in 2023 and is forecast to a readjusted size of USD 29240 million by 2030 with a CAGR of 3.9% during review period.

Automotive cable is an important part of automotive electronic control system. It is bonded, twisted, or braided together to form a single assembly as the circuit in an automotive. Automotive wire and cable are used to transmit electric power, data and other signals as voice in the vehicles. The working environment required the wire and cable to have characteristics like high temperature resistant.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
