Abstracts

According to our (Global Info Research) latest study, the global Automotive CAD Services market size was valued at US\$ 32959 million in 2025 and is forecast to a readjusted size of US\$ 50540 million by 2032 with a CAGR of 6.3% during review period.

Automotive CAD services refer to digital design and engineering modeling services for vehicles and components provided by professional engineering service companies or design outsourcing suppliers, based on computer-aided design (CAD) tools, to OEMs and Tier 1/Tier 2 suppliers. These services include body structure design, chassis and powertrain modeling, interior and exterior styling development, 3D modeling of components, engineering drawing, reverse engineering, digital prototype construction, and virtual verification support in collaboration with CAE/PLM. Essentially, this type of service falls under "engineering capability outsourcing," emphasizing the delivery of manufacturable engineering design data rather than the software tools themselves. Its core value lies in improving R&D efficiency, reducing development costs, and accelerating the cycle from concept design to mass production of complete vehicles.

The automotive CAD service industry is entering a phase of rapid growth with the development of electrification, intelligentization, and software-defined vehicles (SDVs). Vehicle structures are evolving from traditional mechanical architectures to highly integrated electric platforms, significantly increasing the complexity of vehicle design, especially in areas such as battery pack structure, thermal management systems, lightweight bodies, and ADAS integration, leading to a substantial increase in demand for high-precision CAD engineering design. Meanwhile, global OEMs generally adopt a model of "internalizing core R&D and outsourcing non-core engineering" to reduce R&D

costs and quickly acquire global engineering talent resources, making automotive CAD services one of the most stable growing segments in the automotive engineering outsourcing market. In the future, with the popularization of AI-generative design, digital twins, and cloud-based collaborative CAD, the industry will further evolve towards high automation, high parallel design, and global distributed collaboration, upgrading its service value from "drafting outsourcing" to "whole vehicle digital engineering solutions."
