Abstracts

The global Automotive Carbon Fiber Trunk Lid market size is expected to reach \$ 3226 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

In 2025, global sales of automotive carbon fiber trunk lids reached 3.6 million units, with an average selling price of \$520 per unit. Total global production capacity stood at approximately 4.2 million units annually, and the industry's average gross profit margin was around 38%. These trunk lids are lightweight body panels manufactured from carbon fiber composites using autoclave or compression molding processes; they primarily replace traditional steel or aluminum counterparts in high-performance passenger vehicles, modified cars, and new energy vehicles (NEVs). They offer benefits such as weight reduction, improved vehicle handling, and enhanced fuel economy, while combining high impact strength with design flexibility.

Upstream raw materials mainly include carbon fiber prepregs, epoxy resin systems, and structural adhesives; the midstream involves manufacturers performing mold making, layup, curing, and precision machining; and downstream supply targets performance models from OEMs, customized luxury vehicles, as well as automotive modification and aftermarket channels. Future development will focus on cost reductions driving mass adoption, the proliferation of thermoplastic carbon fiber technology, and rising demand for lightweighting in NEVs, while high-end customization and racing-grade applications continue to expand market reach and value-added opportunities.
