Ceramic fuse refers to a fuse device that uses ceramic tubes as the fuse housing. It is usually composed of ceramic tubes, fuses (resistance wires), terminals, and other parts. Among them, ceramic tubes, as the outer shell, have high temperature resistance, corrosion resistance, and good insulation performance; The fuse is the core component of the fuse. When the current exceeds the rated value, the fuse will heat up and melt, thereby cutting off the circuit. Automotive ceramic fuse is a widely used fuse in automotive circuits. It is made of ceramic materials and has a series of unique advantages and characteristics, making it an important component for automotive circuit protection.
