According to our (Global Info Research) latest study, the global Automotive Chassis market size was valued at USD 48120 million in 2023 and is forecast to a readjusted size of USD 59430 million by 2030 with a CAGR of 3.1% during review period.

A chassis is an important part of an automobile and provides the necessary strength to support the components and payloads placed upon it. It is also known as the backbone of a vehicle because all the major components like engine, tires, axle assemblies, brakes, and steering are placed on the chassis. The chassis without the auto components attached to it is known as an automotive frame. A frame is a supporting component of an automobile vehicle.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
