According to our (Global Info Research) latest study, the global Automotive Chassis Motor market size was valued at US\$ 77789 million in 2025 and is forecast to a readjusted size of US\$ 107793 million by 2032 with a CAGR of 4.9% during review period.

Automotive chassis micro motors are specialized micro drive motors with small power and size, used in vehicle chassis systems. They belong to the core category of automotive micro motors and primarily provide power output to various chassis actuators. These motors generally feature small size, high response, vibration resistance, wide temperature range, and high reliability. They are designed to withstand complex operating conditions such as bumps, mud, water, and extreme temperatures. They are widely integrated into chassis functional modules such as air suspension, braking systems, steering systems, chassis lifting mechanisms, and active damping systems. They are responsible for performing mechanical actions such as inflation, adjustment, pushing, pulling, and driving, and are key actuators for achieving intelligent chassis control, active control, and vehicle posture adjustment. They are also indispensable basic actuators in the electronic control systems of modern passenger cars and new energy vehicles.
