Abstracts

The global Automotive Chassis Structural Parts market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automobile chassis structural parts are an important part of the automobile chassis system, including chassis frame, front suspension, rear suspension, chassis beams, trays, tie rods and chassis brackets. As the main structure of the car chassis, the chassis frame provides overall support and rigidity. The front and rear suspensions are responsible for supporting the wheels and providing a comfortable suspension feel. Chassis beams increase the rigidity and stability of the body. The tray protects the chassis structure and other components and improves the aerodynamic performance of the vehicle. Tie rods connect the wheels to the suspension system, enhancing the handling and stability of the vehicle. The chassis bracket is used to fix the chassis structure to ensure its stability during driving. These chassis structural parts together form the basic skeleton of the automobile chassis, providing a stable operating platform for the entire vehicle. Automakers select the appropriate chassis structures and materials for optimal performance, handling and safety based on vehicle model and application.
