## Abstracts

The global Automotive Clutch market size is expected to reach \$ 10830 million by 2032, rising at a market growth of 1.4% CAGR during the forecast period (2026-2032).

Automotive clutch, located between the engine and the transmission, is an isolated part transmitting power from engine to the gearbox, and it allows transmission to be interrupted while a gear is selected to move off from a stationary position, or when gears are changed while the car is moving. An automotive clutch can help the driver enjoy a smooth start and facilitate shaft. It can also prevent the transmission overload and reduce the impact of torsional vibration.

Vehicles with manual transmissions (MT), automated manual transmissions (AMT) and dual clutch transmissions (DCT) use automotive clutches to transmit power from engine to the gearbox. However, in automatic transmissions (AT) and continuously variable transmissions (CVT) vehicles, the torque converter takes the place of the mechanical clutch to transmit power.

An automotive clutch assembly consists of many small parts, but there are five major components: the clutch flywheel, the clutch pressure plate, the clutch disc, the throw-out clutch bearing and release system.

Global Automotive Clutch key players include Schaeffler (Luk), ZF (Sachs), Valeo, F.C.C., Exedy, etc. Global top five manufacturers hold a share nearly 55%.

Europe is the largest market, with a share over 45%, followed by Asia-Pacific, and North America, both have a share about 50 percent.

In terms of product, Dry Friction Clutch is the largest segment, with a share about 80%. And in terms of application, the largest application is Commercial Vehicle, followed by Passenger Vehicle.

This report studies the global Automotive Clutch production, demand, key manufacturers, and key regions.
