An automotive coating thickness gauge is a device used to measure the thickness of coatings on the surface of an automobile (such as paint, primer, anti-rust layer, etc.). This instrument can accurately measure the thickness of the coating, usually without damaging the coating or the substrate, and is an important tool in quality control, maintenance, and research and development. Automotive coating thickness gauges can help ensure that the coating meets the design requirements, detect whether the coating is uniform, and evaluate the wear of the coating under long-term use or environmental factors.
