## Abstracts

Composites are a class of materials that are made of two or more constituent materials having different properties. The properties of the composites are unique and different from those of the constituent materials. The constituent materials of the composites remain separate and distinct and do not blend or dissolve with each other.

Scope of the Report:

This report focuses on the Automotive Composite in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia Pacific is one of the largest automotive manufacturers, holding a share of approximately 53% in 2016. Stringent emission regulations implemented in China, Japan, and India is expected to reduce vehicle weight, which will, in turn, enable fuel saving. Vehicle weight can be reduced by replacing heavy metal components by composites.

The worldwide market for Automotive Composite is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
