## Abstracts

The global Automotive Control Arm market size is expected to reach \$ 2769 million by 2032, rising at a market growth of 1.5% CAGR during the forecast period (2026-2032).

Control arm is a piece of a vehicle's suspension, it is a hinged suspension link between the chassis and the suspension upright or hub that carries the wheel. A vehicle's suspension is a complexity of geometry and leverage. The front suspensions in most vehicles manufactured today not only steer the vehicle, but also drive the vehicle. Front-wheel drive designs rely on a control arm to counteract the engine's torque. By placing an engine torque limiter arm between the engine and the vehicle's chassis, the vehicle is able to be easily steered while applying power to the engine. Without this arm, the vehicle would be nearly impossible to steer when a driver applies power to the wheels.

Asia-Pacific is the largest producer of Automotive Control Arm, with a market share about 50%, followed by North America and Europe, etc. ZF, Magna, Hyundai Mobis, Benteler and Magneti Marelli are the top 5 manufacturers of industry, and they had about 55% combined market share.

This report studies the global Automotive Control Arm production, demand, key manufacturers, and key regions.
