The global Automotive Copolyester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Copolyester is a type of copolymer synthesized by modification of polyesters, which are combinations of diacids and diols. By introducing other diacids or diols to the polyester polyethylene terephthalate (PET), the material becomes a copolyester due to its comonomer content.

Copolyester for automotive is a copolyester that offers high performance and versatility for various applications in the automotive industry, such as interior trim parts, cable insulation, air ducts, tubes, hoses, boots, bellows and cables. Copolyester for automotive has advantages such as:

High temperature resistance within the thermoplastic elastomer (TPE) family

Excellent elasticity and flexibility

Good chemical, heat and wear resistance

Easy processability and recyclability

Lower environmental impact compared to conventional rubbers.

This report studies the global Automotive Copolyester production, demand, key manufacturers, and key regions.
