Abstracts

According to our (Global Info Research) latest study, the global Automotive Cover Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. Cover glass, also known as protective glass, is used in the field of vehicle display for functions such as drop resistance, scratch resistance, high temperature resistance, etc., and the raw material is the original cover glass. From the perspective of the industrial chain, the original cover glass needs to be verified by glass processing factories, touch screen factories, and terminal brand factories, undergo various tests, and finally achieve mass production. Vehicle-mounted cover glass is a highly customized product, with difficult processes and high research costs. It is an application that requires the integration of multidisciplinary technologies. According to the production process, cover glass mainly includes float method and overflow method. The overflow method means that the molten glass enters the overflow channel from the feeding part, flows downward along the surface of the long overflow tank, and merges at the bottom of the wedge-shaped body at the bottom of the overflow tank to form a glass ribbon, which is formed into a flat plate after annealing. Glass is currently a hot technology in the manufacture of ultra-thin cover glass. Float method means that the molten glass flows into the molten metal float tank after being discharged from the furnace. The glass in the float tank is freely flattened on the surface of the metal liquid by surface tension and gravity. When it reaches the end of the tank, it is cooled to a certain temperature. After coming out of the float tank, the glass enters the annealing furnace for further cooling and cutting. After the cover glass is crafted, it needs to go through cutting, carving, grinding, silk screen printing, coating, cleaning and other production processes to realize many functional requirements.

As a material for the protective cover of the display screen in the car, after solving the safety problems of the car regulations, the glass has been used in many models due to its high hardness (not easy to be scratched), excellent optical performance (clearer image) and good touch. Apply in batches.
