According to our (Global Info Research) latest study, the global Automotive Crankcase Ventilation System market size was valued at USD 23870 million in 2023 and is forecast to a readjusted size of USD 33640 million by 2030 with a CAGR of 5.0% during review period.

During the combustion process in the engine cylinders, the combustion gases, along with unburned gases, slip through the piston rings and are called as blow-by. The blow-by slips through the piston rings into the crankcase, the blow-by along with oil cause an inadmissible rise in pressure inside the crankcase, so has to be continuously removed from the crankcase. The ventilation system used for taking out or recirculating the blow-by into the engine inlet is called crankcase ventilation (CCV) system.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
